Sexual intercourse between husband and wife is a joyful expression of their love for each other.

It is an act of intimate self-giving, made by two people who want to give everything of themselves to the person they love and respect.

When a couple make love the husband's penis becomes stiff and is placed inside his wife's vagina. Millions of sperm cells are released when the man ejaculates at the peak moment of his sexual arousal. Each sperm cell has a long tail that it uses to swim through the cervix, into the uterus, and eventually into his wife's fallopian tubes.

Relationships in Moral Education

2) Understand how a child grows within the mother's womb.

Although a hundred sperm cells may reach the egg cell only one sperm can enter the egg to fertilise it.

After a few days,
the cell divides repeatedly to form a ball of cells.

After 8 weeks
the baby has eyes but no eyelids. It is making tiny movements but its muscles cannot yet support them yet.

After 16 weeks,
the baby begins to swallow and pass urine. It has fingers and toenails. At this stage its skin is bright red and transparent.
